### New GoS caliber

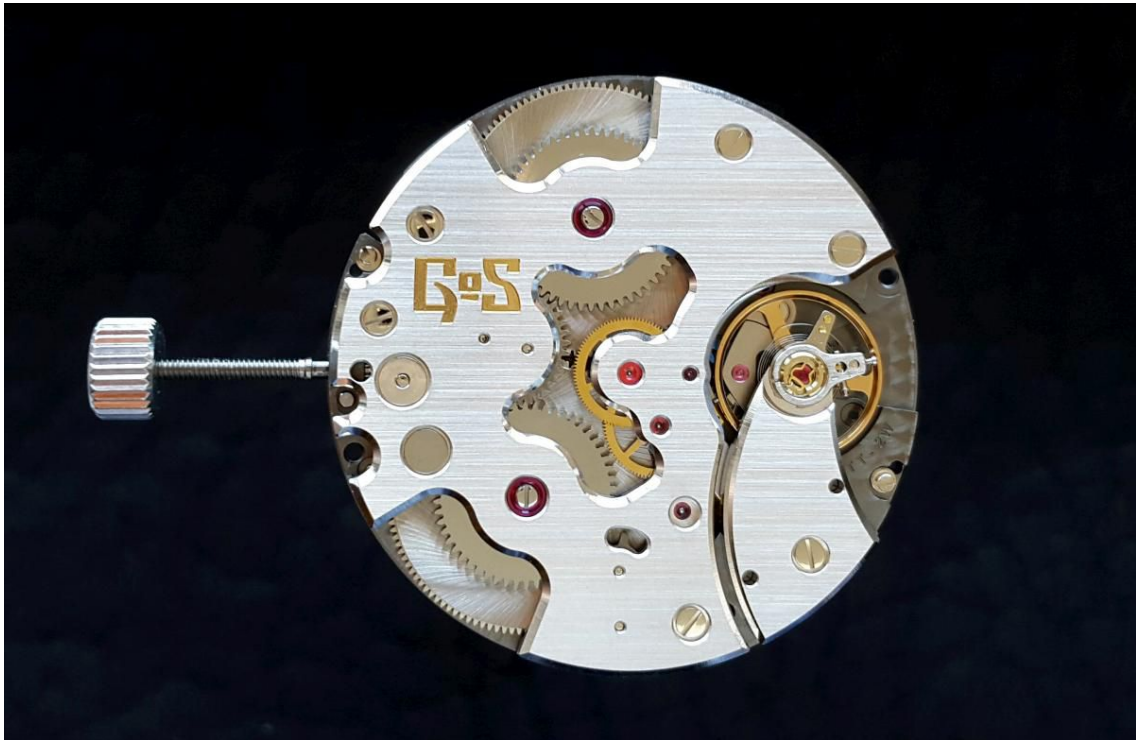

GoS is proud to announce our new manufacture caliber - the GoS02! The GoS02 features a manually wound, twin-barrel design boasting a 5 day power reserve. This movement will power all of the high end GoS models starting with the new edition of the Winter Nights, which is currently in production.

The layout and size of the movement will give us the opportunity for customizations such as engravings and skeletonizations. However, the first "enhancement" will (naturally) be a Damascus steel customization similar to those we have created for our previous GoS models. The bridges of the base caliber have a straight grained finish with deep, high-gloss polished beveled edges, while the main-plate has received perlage and a dark gray surface treatment. All wheels as well as the GoS logo are gold plated to match the pink gold details of the GoS watches.

*GoS02 - TT718*

The base caliber is manufactured for us by Technotime in Le Brenets, Switzerland. All customization and custom bridge manufacturing is executed by us in the GoS workshop. Technotime masters all steps in movement manufacturing, including the balance spring. Their exceptionally high quality has gained them the business of some of the most discriminating customers in the world, as they now have several independent watch brands as their clients.
